Bending press unit

Anti scratch table

Electrical system

## Main Function

- Double heads busbar dust bending press a new type of processing equipment developed by our company, the main functions is bending the two ends of connection busbar of the line of the bus dust, and bending double bends once for each end of the busbar dust. No need to change the direction of one bus dust, with the advantages of high processing speed, less steps, high accuracy, saving time and labor etc.

## Main Features

- This machine mainly for bending the two ends of connection busbar of the line of the busbar dust.
- The two ends of the machine adopts hydraulic working mode, which has the advantages of high pressure, stable performance and so on.
- The double bends of the two ends of the busbar are formed once, fast processing speed, high efficiency.
- Large tonnage hydraulic cylinder with large flow gear pump, to ensure the running speed of the equipment
- Major components are well-known brands, to ensure the stability of the device.

## Data parameter

| Name             | unit | parameter            |
|------------------|------|----------------------|
| Nominal pressure | KN   | 600KN                |
| Machining range  | mm   | 3 × 30-6 × 200mm     |
| Total power      | KW   | 4KW                  |
| Overall size     | mm   | 3600 × 1000 × 1500mm |
| Total weight     | KG   | 1300KG               |

## Random accessories

- 2 sets of bending mold, 2 sets of the foot switch, 1 sets of attachment tool, instruction, 1 set of the certificate.
